

Substitute Specification SN 10/587,486

ABSTRACT

A device (1) for containing and dispensing tablets, wherein vial
bottles (3) filled with tablets wait in waiting spaces (701a, b, c) and the vial
5 bottles (3) are taken out from the waiting spaces (701a, b, c). A plurality of
pairs of holding members (703a, b) facing each other for holding the bodies
of the vial bottles (3) are installed in the waiting spaces (701a, b, c). Also,
stock sensors (710) in the same quantity as the pair of holding members
(703a, b) are installed to check for each pair of holding members whether a
10 vial bottle is held on the pair of holding members (703a, b) or not.
